

Table of Contents

Skills Modules

1. Teaching Computational Thinking Skills
2. Diversity, Equity, and Inclusion
3. Teaching, Integrating, and Assessing 21st Century skills
4. Project-Based Learning
5. Game-based Learning
6. How to Assess and Measure Student Progress
7. SEL (Social & Emotional Learning)
8. Scaffolding Instruction: Using ZPD (Zone of Proximal Development) and i+1 Models
9. Cultivating Students' Growth Mindsets
10. Distance Learning Strategies for Computer Science Classes

CS Concepts Modules

CHAPTER 1 LESSONS:

1. Algorithms and Problem Solving
2. Introduction to Debugging
3. Creating the Capstone Project
4. Impacts of Computing: How Technology Has Solved and Created Problems

CHAPTER 2 LESSONS:

1. Reviewing Algorithms & Syntax
2. Debugging Strategies
3. Impacts of Computing: How Technology Affects Different Careers
4. Variables
5. Variables with Strings
6. Networks and the Internet: How Networks and the Internet Work
7. Conditionals
8. Comparators and Conditionals
9. If/Else Conditionals
10. Creating the Capstone Project
11. Computing Systems: How Computers Work

CHAPTER 3 LESSONS:

1. Reviewing Objects, Methods, Variables, Conditionals
2. Arithmetic with Variables
3. Computing Systems: The Roles of Hardware and Software
4. Introduction to For Loops
5. Nested Loops
6. Nested Structures
7. Cybersecurity
8. While Loops
9. Creating the Capstone Project
10. Networks and the Internet: Encrypting Information
11. Data and Analysis: Encoding Schemes

CHAPTER 4 LESSONS:

1. Else/If Conditionals
2. Compound Conditionals
3. Networks and the Internet: Physical and Digital Security
4. Introduction to Functions
5. Data and Analysis
6. Writing Functions
7. Computing Systems: Design Your Own Computing System
8. The Design Thinking Process
 - ◇ Conducting Competitive Research
 - ◇ Building a Prototype
 - ◇ Playtesting a Prototype
 - ◇ Building a Game
 - ◇ Presenting a Game
9. Accessibility in Technology
10. Bias and Stereotypes in Technology
